

AI-ASSISTED PREVENTIVE HEALTH REPORT

Hitarth

Son · 20 years · male

HIGHEST RISK

85%

Hypertension

KEY MEASUREMENTS

Known conditions: Hypertension, Diabetes, Heart Disease

BMI 24.3 —	BLOOD PRESSURE 120/84 mmHg Latest recorded	HBA1C 5.4 Blood sugar marker	SMOKING current Lifestyle factor
---------------------------------	---	---	---

RISK PROFILE

Multi-condition assessment. Scores are indicators, not diagnoses.

Diabetes	80%	HIGH PRIORITY
Hypertension	85%	HIGH PRIORITY
CVD	70%	HIGH PRIORITY
Stroke	65%	MONITOR CLOSELY

AI SUMMARY

High risk of Diabetes, Hypertension, and CVD due to current smoking habits, known conditions, and family history. Severe fatigue and poor sleep quality may exacerbate these conditions. Current medication (Amlodipine 5 mg once daily) may require adjustment based on clinical evaluation.

KEY FINDINGS

- **1** Current smoker with known Hypertension, Diabetes, and Heart Disease
- **2** Family history of Kidney Disease, Stroke, and Cancer
- **3** Severe fatigue and poor sleep quality (3 hrs/night)
- **4** Elevated Cholesterol (178) and Creatinine (0.9) levels

CARE RECOMMENDATIONS

- **1** Cardiologist evaluation for high hypertension and cardiovascular risk
- **2** Endocrinologist evaluation for Diabetes management
- **3** Nephrologist evaluation for Kidney Disease risk assessment

SUGGESTED CHECKUPS

- **1** Regular blood pressure monitoring
- **2** HbA1c and Fasting Glucose tests every 3 months
- **3** Lipid profile and Creatinine tests every 6 months
- **4** Electrocardiogram (ECG) and Echocardiogram every 12 months

LIFESTYLE PLAN

- **1** Quit smoking to reduce cardiovascular risk
- **2** Increase physical activity to moderate or high intensity
- **3** Improve sleep quality by establishing a consistent sleep schedule
- **4** Maintain a balanced diet with emphasis on fruits, vegetables, and whole grains
- **5** Reduce stress through relaxation techniques such as meditation or yoga
